# PODIMEKALA PRASHANTH

Java | Python | REST APIs & Microservices | CI/CD & DevOps

Hyderabad, India | +91 9032801905 | prashanthpodimekala@gmail.com | LinkedIn | GitHub

## PROFESSIONAL SUMMARY

Highly motivated Computer Science graduate (B.Tech – AI & ML, 2026) with strong programming fundamentals in Java and Python, hands-on experience building REST APIs, microservices, and automation components across 4 production-grade projects. Experienced in writing clean, maintainable, and well-documented code following team guidelines, participating in code reviews, debugging, and iterative problem-solving. AWS Certified with CI/CD pipeline experience and a strong interest in backend systems and scalable FinTech architecture. Eager to contribute to Zorvyn's engineering team as an SDE Intern — solving real technical challenges and building secure, high-performance financial systems.

## TECHNICAL SKILLS

**Languages:** Java, Python, SQL, JavaScript, TypeScript
**Backend & APIs:** Spring Boot, Spring MVC, REST APIs
**Automation:** Python scripts, GitHub Actions CI/CD, Automated Testing
**Cloud & DevOps:** AWS Certified (EC2, RDS), Git, GitHub, CI/CD
**Databases:** MySQL, PostgreSQL, SQL
**Frontend:** React.js, HTML, CSS, JavaScript

## PROJECTS

**Task Management System — Java Backend + REST APIs** *Jan 2024 – Apr 2024*
*Java | Spring Boot | Hibernate/JPA | React.js | MySQL | JUnit | Maven | CI/CD | GitHub Actions*

- Collaborated on design and development of a full-stack application — designed and built 12+ RESTful API endpoints following MVC architecture with Hibernate/JPA ORM, writing clean, maintainable, and well-documented code aligned with team guidelines across 3 Agile sprints.
- Assisted in building API and microservice components for core workflow automation — implemented JWT-based authentication and RBAC for 3 user roles, securing all endpoints against unauthorised access with production-grade security standards.
- Participated in code reviews, debugging sessions, and iterative problem-solving — wrote 20+ JUnit unit and integration tests achieving 85% code coverage; performed systematic root cause analysis and defect resolution across the full stack.
- Learned and applied best practices in version control, unit testing, and continuous integration — set up GitHub Actions CI/CD pipeline for automated build, test, and deployment; maintained zero major post-production defects across all releases.
- Worked with QA team to validate features, identify issues, and propose improvements; maintained complete documentation of architecture, API contracts, and deployment history throughout the project lifecycle.

**Restaurant Management System — Cloud Backend & APIs** *Sep 2022 – Feb 2023*
*Java | Spring Boot | Spring MVC | Hibernate/JPA | MySQL | AWS (EC2, RDS) | Maven | CI/CD*

- Designed and developed a cloud-hosted backend system on AWS EC2 and RDS — built scalable API services supporting online ordering, billing, and order tracking with Maven-based CI/CD pipeline; reduced processing time by 35% through optimised SQL queries and automated workflows.
- Researched and implemented performance and reliability improvements — optimised database query performance, implemented secure session management, and validated all API endpoints for reliability under load.
- Wrote clean, maintainable Java code following SDLC best practices; maintained documentation of all design decisions, infrastructure configuration, and deployment procedures for team knowledge transfer.

**Text-to-Speech & Speech-to-Text System — Python Backend** *Aug 2023 – Dec 2023*
*Python | NLP | Deep Learning | TensorFlow | REST API | React.js | CI/CD*

- Designed and developed a Python-based backend automation system achieving 95% NLP recognition accuracy across 10,000+ interactions — wrote clean, efficient Python code for model inference pipelines, REST API integration, and real-time data processing.
- Researched and implemented optimisations to enhance performance and reduce latency by 30% — applied iterative problem-solving to identify bottlenecks and improve pipeline reliability for production-grade performance.

- Exposed the backend as a RESTful API service; collaborated with QA team to validate features, test edge cases, and propose improvements based on real user feedback post-launch.

**CCTV Crowd Monitoring System — Python Automation & DevOps** *Mar 2023 – Jul 2023*

*Python | Computer Vision | Object Detection | Motion Tracking | CI/CD | Git | Docker*

- Built a Python automation system using computer vision and object detection algorithms — improved crowd management accuracy by 30% and reduced incident response time by 25% through scalable, real-time alerting components.
- Applied best practices in version control (Git), unit testing, and CI/CD — maintained automated regression testing pipeline for every model update; ensured reproducible, stable deployments with zero unplanned downtime.
- Collaborated with senior team members on design and testing of automation modules; documented all components, scripts, and deployment procedures for ongoing maintenance and team knowledge transfer.

## EDUCATION

**B.Tech – Computer Science & Engineering (AI & ML)** *2022 – 2026*

*Malla Reddy Institute of Technology and Science | CGPA: 7.1 / 10*

*Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering, Cloud Computing, NLP, OOP, Machine Learning*

## CERTIFICATIONS

- AWS Cloud Practitioner – Brainovision (2024) | Cloud infrastructure, EC2, RDS, deployment and services
- Software Engineering Job Simulation – Accenture, Forage (2024) | Agile, SDLC, code review, clean code
- Front-End Software Engineering Simulation – Skyscanner, Forage (2024) | React.js, component design
- Software Engineering Simulation – Quantium, Forage (2024) | Data-driven engineering, problem-solving
- Power BI Data Analyst – Simplilearn (2023) | Business intelligence, dashboards, data visualisation
